ELIMINATING HUMAN ERROR FROM THE FIELD

For mobile workers who are already preoccupied, looking up items, assets, and even tasks in FieldAware can be a chore. Companies that have hundreds or thousands of items, assets, and tasks with complicated naming conventions have an even harder time.

Using the barcode scanner a mobile worker can pull up the complete make, model, and serial number for an asset and add photos and notes to the record. That same worker can also add items and cost to a job without having to identify them and manually look it up. Adding tasks to a job is just as simple.

Because workers in the field no longer have to identify every item and asset they work with, jobs can be completed faster and less experienced workers have a lower error rate.

MORE POWER FROM THE SAME HARDWARE

The FieldAware barcode scanner uses the same smartphone or tablet your mobile workers are using today. To read a barcode, you simply tap on the barcode icon and point your device’s camera at the barcode. FieldAware will automatically pull the UPC from the barcode and input it into the field.
WORK FASTER WITHOUT WORKING HARDER

Any time that your mobile workers are spending on looking up items, assets, and tasks is time that they are not focused on getting the job done right. By barcoding your inventory and assets, you are giving this time back to your workforce. If you already have bar codes, associating items, assets, and tasks is as easy as adding the UPC to the description.

FEATURES

- One tap to access all of your items, assets, and tasks
  - Barcodes can associate with one or a group
  - Easily associate barcodes to your asset, item, or task by adding the UPC to the description
  - Eliminate time and error associated with searching for assets, items, and tasks manually

- When you need to scan a barcode, simply tap the barcode icon in FieldAware and point your device’s camera at the barcode you wish to scan. Once in focus, FieldAware will automatically capture the barcode and put the UPC code in the item, asset, or task field. From there, simply tap on the thing you wish to add to your job.
